The Keytracker™ Inventory Data Collector

Remember Everything

With an impressive 512 KB of data memory, you'll see full details of your inventory data including Price, Each-Quantity, Case-Quantity, Section, Category, and Total Dollar Value and Total Piece Count.

Easy To Learn

"What do I do next?" How many times have you heard that from employees, especially trainees?

A large, clearly marked 4 line X 20 Character display will guide you: increasing productivity and decreasing training time.

Find Your Data

At any time, you can find any entry made during the inventory, quickly and easily.

Powerful and *Fast*

The Keytracker can assign your inventory data into 10,000 Sections and 10,000 Categories.
And, amazingly, both dollar value and item count are accessible for any Section or any Category with just a few keystrokes.

In addition, you can determine Cost as a percentage of Retail or determine the each-price from the case-price. All, quickly and effortlessly.

Keep Informed

Because the Keytracker was designed to be used by-touch for maximum data entry speed, no less than six separate audible warnings are utilized. These signals are issued for Logic Errors, Non-Common Entries, Entry Totals of $ 100.00 or more, Entry Totals of $ 1,000.00 or more, Negative Entries and a Low-Battery warning.

Your Data is Safe

Your hard-earned data remains safe even when changing batteries.

Specifications

Keyboard: 23 keys, ergonomically engineered for maximum data entry speed and minimum user fatigue, 4-mm travel with tactile feedback.

Display: 4 line X 20 Character Supertwist Alpha-Numeric LCD

Weight: Less than 30 oz. including batteries

Batteries: Four AA Alkaline will yield approximately 100+ hours of field use.

Battery Backup: Super-Capacitor – Minimum of two hours data integrity with batteries removed.

CPU: Advanced Dallas triple-speed microprocessor.

Data Memory: Over 40,000 complete entries.
